

IoT Air Quality Monitoring System

ESP32 microcontroller

01. Idea

Monitor air quality in real time
Use sensors + ESP32 + cloud

03. System

- ESP32 microcontroller
- MQ-135 (gas sensor)
- PM2.5 (dust sensor)
- MQ-3 (alcohol sensor)
- Wi-Fi connection

MQ-135 gas sensor

PM2.5 sensor

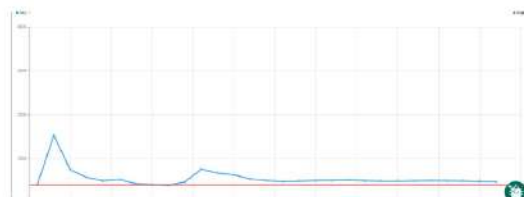

MQ-3 sensor

04. Features

Features
Real-time monitoring
Wireless (Wi-Fi)
Low cost
Easy to use

Results

Stable readings Data shown on dashboard
Works in real time

02. Problem

Air pollution is harmful
Monitoring systems are expensive
Need low-cost solution

How it Works?

Sensors → ESP32 → Wi-Fi → Cloud → Dashboard

06. Conclusion

The system works successfully
Affordable and reliable
Useful for homes & industry
